

Citea NG

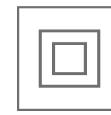

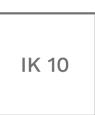

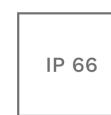

New generation. New lighting levels. New features.

Completely redeveloped, the only feature that the Citea New Generation (NG) shares with its predecessor, is the pure design that easily blends into all types of rural and urban environments.

Thanks to a new mechanical design, the long life span of the LEDs is guaranteed and performance is assured over time.

The Citea NG is equipped with second generation LensoFlex®2 photometric engines that have been specifically developed to light various spaces where the safety and well-being of the people using the environment are essential.

URBAN &
RESIDENTIAL
STREETS

BRIDGES

BIKE &

PATHS

RAILWAY
STATIONS &
METROS

CAR PARKS

LARGE AREAS

SQUARES &
PEDESTRIAN
AREAS

ROADS &
MOTORWAYS

Concept

Citea NG has been designed to incorporate the latest generation of LEDs and optics. The mechanical design was carefully thought-out to separate the LED module and the driver compartment to optimise thermal management.

Citea NG is composed of a high-pressure, die-cast aluminium body and a glass protector.

Citea NG is available in two sizes: Mini and Midi. Mini, which can incorporate 8 to 48 LEDs is ideal for lighting residential streets, urban roads and car parks while the Midi which can integrate from 16 to 96 LEDs is perfect for main roads, avenues and squares. With suspended or side-entry mounting options, it can be installed on various brackets (single, double, wall) and columns for a perfect integration into the landscape.

Citea NG is available in two sizes: Mini and Midi.

Citea NG benefits from a range of mounting options and brackets.

Types of application

- URBAN & RESIDENTIAL STREETS
- BRIDGES
- BIKE & PEDESTRIAN PATHS
- RAILWAY STATIONS & METROS
- CAR PARKS
- LARGE AREAS
- SQUARES & PEDESTRIAN AREAS
- ROADS & MOTORWAYS

Key advantages

- Timeless and elegant design for rural and urban environments
- Two sizes available: Mini and Midi
- Protector in extra-clear tempered glass for high-performance
- Wide range of mounting options and brackets
- Low energy consumption
- LensoFlex®2 photometric engine with photometry adapted to various applications
- ThermiX® for long lasting performance
- FutureProof: easy replacement of photometric engine and power supply on-site
- Designed to incorporate the Owlet range of control solutions

Citea NG takes advantage of the proven LensoFlex®2 photometric engines.

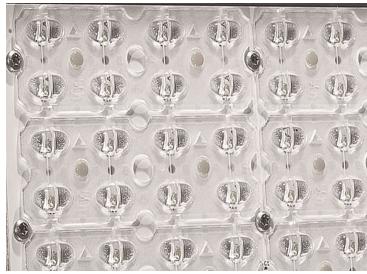

Designed to incorporate the Owlet range of control solutions.

LensoFlex®2

LensoFlex®2 is based upon the addition principle of photometric distribution. Each LED is associated with a specific PMMA lens that generates the complete photometric distribution of the luminaire. The number of LEDs in combination with the driving current determines the intensity level of the light distribution.

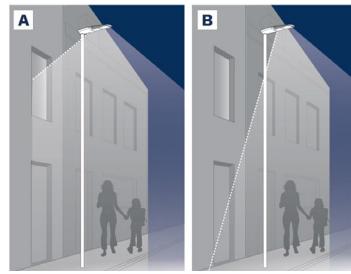

The proven LensoFlex®2 concept includes a glass protector to seal the LEDs and lenses into the luminaire body.

Back Light control

As an option, the LensoFlex®2 modules can be equipped with a Back Light control system.

This additional feature minimises light spill from the back of the luminaire to avoid intrusive light towards buildings.

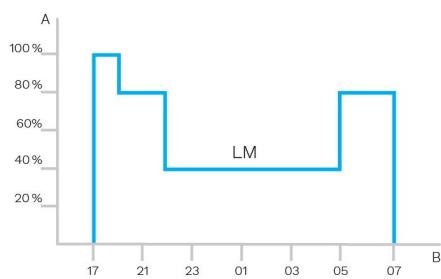

A. Without Back Light control | B. With Back Light control

Custom dimming profile

Intelligent luminaire drivers can be programmed with complex dimming profiles. Up to five combinations of time intervals and light levels are possible. This feature does not require any extra wiring.

The period between switching on and switching off is used to activate the preset dimming profile. The customised dimming system generates maximum energy savings while respecting the required lighting levels and uniformity throughout the night.

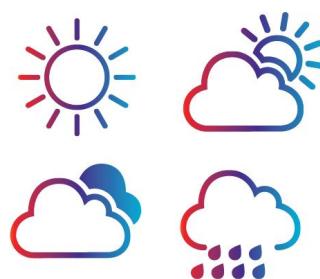

A. Performance | B. Time

Daylight sensor / photocell

Photocell or daylight sensors switch the luminaire on as soon natural light falls to a certain level. It can be programmed to switch on during a storm, on a cloudy day (in critical areas) or only at nightfall so as to provide safety and comfort in public spaces.

PIR sensor: motion detection

In places with little nocturnal activity, lighting can be dimmed to a minimum most of the time. By using passive infrared (PIR) sensors, the level of light can be raised as soon as a pedestrian or a slow vehicle is detected in the area.

Each luminaire level can be configured individually with several parametres such as minimum and maximum light output, delay period and ON/OFF duration time. PIR sensors can be used in an autonomous or interoperable network.

Owlet IoT

Owlet IoT remotely controls luminaires in a lighting network, creating opportunities for improved efficiency, accurate real-time data and energy savings of up to 85%.

ALL-IN-ONE

The LUCO P7 CM controller includes the most advanced features for optimised asset management. It also provides an integrated photocell and operates with an astronomical clock for seasonal dimming profile adaptations.

EASY TO DEPLOY

Thanks to wireless communication, no cabling is needed. The network is not subject to physical constraints or limitations. From a single control unit to an unlimited network, you can expand your lighting scheme at any time. With real-time geolocation and automatic detection of luminaire features, commissioning is quick and easy.

USER-FRIENDLY

Once a controller is installed on a luminaire, the luminaire automatically appears with its GPS coordinates on a web-based map.

An easy-to-use dashboard enables each user to organise and customise screens, statistics and reports. Users can gain relevant, real-time insights.

The Owlet IoT web application can be accessed at all times from anywhere in the world with a device connected to the Internet. The application adapts to the device to offer an intuitive and user-friendly experience.

Real-time notifications can be pre-programmed to monitor the most important elements of the lighting scheme.

Plugging the LUCO P7 CM controller onto the 7-pin NEMA socket.

SECURE

The Owlet IoT system uses a local wireless mesh communication networks to control the on-site luminaires combined with a remote control system utilising the cloud to ensure smooth data transfers to and from the central management system.

The system uses encrypted IP V6 communication to protect data transmission in both directions. Using a secure APN, Owlet IoT ensures a high level of protection.

In the exceptional case of a communication failure, the built-in astronomical clock and photocell will take over to switch the luminaires on and off, thus avoiding a complete blackout at night.

EFFICIENT

Thanks to sensors and/or pre-programmed settings, lighting scenarios can be easily adapted to cope with live events, providing the right lighting levels at the right time and in the right place.

The integrated utility grade meter offers the highest accuracy available on the market today, enabling decisions based on real figures.

Accurate real-time feedback and clear reporting ensures that the network operates efficiently and maintenance is optimised.

When LED luminaires are switched on, the inrush current can create problems for the electricity grid. Owlet IoT incorporates an algorithm to preserve the grid at all times.

OPEN

The LUCO P7 CM controller can be plugged onto the standard 7 pin NEMA socket and operates through either a DALI or 1-10V interface to control the luminaire.

Owlet IoT is based on the IPv6 protocol. This method for addressing devices can generate an almost unlimited number of unique combinations to connect non-traditional components to the Internet or computer network.

Through open APIs, Owlet IoT can be integrated into existing or future global management systems.

The Schréder Bluetooth solution consists of 3 main components:

- A Bluetooth dongle plugged into the modular driver of the luminaire (BLE transceiver)
- A Bluetooth antenna fitted on the luminaire
- A smartphone application called Sirius BLE

Easy to use

The Schréder Bluetooth solution is ideal for the on-site configuration of individual outdoor luminaires using Bluetooth. From the ground, the user is able to switch the luminaire on or off, adapt the dimming curve, read diagnostic data and much more. A user-friendly application called Sirius BLE provides an easy and secure access to the control and configuration functions.

Whether you are managing a lighting network in an urban or a residential area, this solution will make it easy to control your outdoor luminaires while simply standing by the pole.

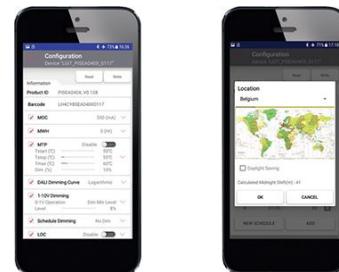

Quick and easy pairing

Get the Sirius App from Schréder. Go to the menu. Press the “SCAN DEVICE (START)” button, to search for the surrounding BLE modules. They will be displayed with a bar graphic (signal intensity) to indicate the closest and the most distant one you can reach. Click on the device you want to connect to and enter your personal access key to control the luminaire.

Defining the settings

Once you are connected to a luminaire, you can set various parameters such as the maximum output current, minimum dimming level and custom dimming profile.

Manual dimming control

The App enables you to do a manual override to adapt the dimming levels instantly. Simply tap on the “Dimming” button in the main menu and adjust the dimming using the wheel and button. Predefined dimming levels can be applied immediately. The corresponding value is displayed on the wheel. This enables you to test the ON / OFF and dimming features of the luminaire paired to the smartphone.

On-site diagnostic

When a luminaire is paired, you can access various diagnostic information: total number of power up events, operation time of LED module and driver, total energy consumption of LED driver... etc. You can also track operating events (short circuits, thermal shutdowns...). The diagnostic values may be the current state or values accumulated to date.

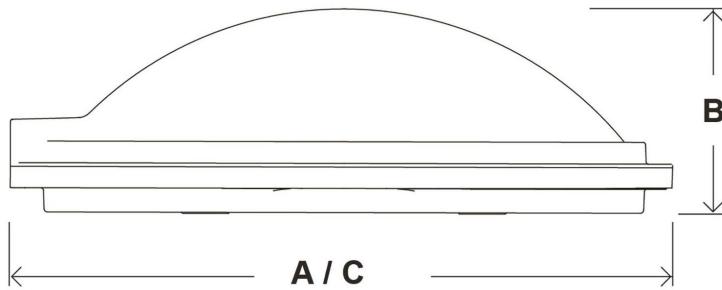

GENERAL INFORMATION		ELECTRICAL INFORMATION	
Recommended installation height	4m to 12m 13' to 39'	Electrical class	Class I EU, Class II EU
FutureProof	Easy replacement of the photometric engine and electronic assembly on-site	Nominal voltage	220-240V – 50-60Hz
Driver included	Yes	Power factor (at full load)	0.9
CE Mark	Yes	Surge protection options (kV)	10
ENEC certified	Yes	Electromagnetic compatibility (EMC)	EN 55015 / EN 61000-3-2 / EN 61000-4-5 / EN 61547
ROHS compliant	Yes	Control protocol(s)	Bluetooth, 1-10V, DALI
Testing standard	LM 79-08 (all measurements in ISO17025 accredited laboratory)	Control options	AmpDim, Bi-power, Custom dimming profile, Photocell, Remote management
HOUSING AND FINISH		Socket	Low voltage socket (optional) NEMA 7-pin (optional)
Housing	Aluminium	Associated control system(s)	Sirius BLE Owlet Nightshift Owlet IoT
Optic	PMMA	Sensor	PIR (optional)
Protector	Tempered glass Frosted glass	· Low voltage socket only available for Citea NG Midi	
Housing finish	Polyester powder coating	OPTICAL INFORMATION	
Standard colour(s)	AKZO grey 900 sanded	LED colour temperature	2700K (Warm White 727) 3000K (Warm White 730) 3000K (Warm White 830) 4000K (Neutral White 740)
Tightness level	IP 66	Colour rendering index (CRI)	>70 (Warm White 727) >70 (Warm White 730) >80 (Warm White 830) >70 (Neutral White 740)
Impact resistance	IK 10	Upward Light Output Ratio (ULOR)	0%
Vibration test	Compliant with modified IEC 68-2-6 (0.5G)	LIFETIME OF THE LEDS @ TQ 25°C	
· Any other RAL or AKZO colour upon request			
OPERATING CONDITIONS		All configurations	100,000h - L90
Operating temperature range (Ta)	-30 °C up to +55 °C / -22 °F up to 131 °F		
· Depending on the luminaire configuration. For more details, please contact us.
